Oral : Presentation :

Intro : Nowadays, IA is everywhere in our life. In this presentation we will see the link between IA and science fiction over the years.

First of all, we need to define the concept of intelligence.

The definition is the ability to learn from experience, solve problemes, and use knowledge to adapt to new experiences.
There are 5 main component of humain intelligence :
- learn
- understanding
- reasoning
- adaptability
- Emotional intelligence

There are differente type of intelligence :
- analytical intelligence.
- creativity intelligence.
- social intelligence.
- Practical intelligence.

AI developers are trying to improve artificial intelligence and bring it as close as possible to human intelligence.
For instant they succeed to product these components :
- learn
- understanding
- reasoning
- adaptability
- Emotional intelligence

To measure their intelligence, they must undergo tests such as the Turing Test and logic Test.

To have autonomous and smart IA / robots, they need to have goals (like curiosity) and complete the component of intelligence. We talk about strong IA.
↳ (montrer weak IA (actuel), strong IA and superintelligence).
For instance, we are not in these case, we will see the evolution of IA and we do a link with severals movies, book of Science fiction to see how people see this technology.
